Design systems engineer with 10+ years building the component libraries, design tokens, and AI-powered tooling that keep product and design coherent at scale. I architected Intapp's Uniform Design System from a blank repo into infrastructure used by 5+ product teams, spanning React, Angular, Next.js, and Web Components, with a semantic token architecture, WCAG 2.1 accessibility built in by default, and an AI Design System Assistant and Figma MCP integration that bring AI directly into daily design and engineering workflows. Fluent in Figma and code, and equally comfortable shipping components, mentoring engineers, and setting technical direction for a system used well beyond a single team.

AREAS OF EXPERTISE

Design System Architecture | Component & Token Design | Multi-Framework Engineering (React, Angular, Next.js, Web Components) | AI-Native Design Tooling | Figma-to-Code Integration | Accessibility (WCAG 2.1) | Design System Governance | Documentation & Adoption | Cross-Functional Collaboration | Mentorship

EXPERIENCE

Lead UI Engineer | Intapp, *2022 - 2026*

- Architected Intapp's Uniform Design System from the ground up: a production-ready component library spanning React, Angular, Next.js, and Web Components (StencilJS) from a single mono-repo
- Delivered 30+ production components built to WCAG 2.1 standards, adopted by teams including Time, Activator, and Billstream
- Designed and implemented a semantic design token architecture using Style Dictionary, enabling dark/light mode, white-labeling, and rapid rebranding applied across all Intapp products
- Built an AI Design System Assistant (Slack/ZeroHeight) and a Figma MCP integration for real-time design-to-code alignment, bringing AI directly into daily design and engineering workflows
- Built a create-intapp-app CLI for instant UDS-preconfigured project scaffolding, reducing setup time for every new project built on the platform
- Integrated ZeroHeight and Storybook into a unified documentation ecosystem for seamless design-to-code handoff, keeping design guidelines and live component references in sync
- Established an Artifactory private registry and CI/CD pipeline as the single versioned source for all UDS packages, co-reducing CI test times from 12+ minutes to under 4 minutes
- Drove design system adoption across 5+ product engineering teams and set the integration playbook for acquired products, positioning UDS as the default infrastructure for every new product at Intapp
- Presented the investment case for UDS to senior leadership, framing the design system as AI-ready, org-wide shared infrastructure and securing expanded roadmap and headcount
- Mentored and developed 2 UI Engineers through structured career development, contributing to documented promotion cases for both to Senior UI Engineer

Freelance Design Systems Consultant | AppHammer | Artifact Engine, *Jan 2024 - June 2025*

- Designed and built a complete design system for Artifact Engine, an AI-driven content management system for agencies: design tokens, a Figma component library, and a Tailwind CSS configuration serving as a unified source of truth across the product
- Architected a Figma-to-production pipeline that reads token values directly from Figma files and applies them at build time, eliminating manual design handoff and keeping design and production permanently in sync
- Built a schema-driven page rendering system using Django and vanilla JavaScript/HTML: predetermined content blocks and a content schema drive dynamic page output without a component framework dependency
- Demonstrated a framework-agnostic approach to design systems, proving that a token-based system can power any frontend stack, not just React or Next.js ecosystems

Full Stack Developer | Syracuse University - Marketing & Communications, *Jan 2020 - 2022*

- Initiated and built the University's design system: audited 15+ web properties, defined design tokens and a shared CSS framework, and published distributed NPM component packages for cross-team reuse

- Developed CMS platforms using Django/Wagtail (Python), Umbraco (C#), and WordPress; enforced WCAG accessibility compliance across all deployments
- Configured and maintained Grunt and Gulp build pipelines to compile Sass, bundle scripts, and automate deployment across multiple web properties
- Led cross-functional planning with strategy, UX, and dev-ops teams to establish MVP scope, API contracts, and iterative release cadence for new platform initiatives

Front End Engineer | TCGplayer.com - Seller Services, *2018 - Jan 2020*

- Built front-end of e-commerce kiosk and point-of-sale applications using Vue.js and Umbraco CMS in an Agile environment
- Collaborated with product owners and UX designers on feature requirements, user testing, and release planning

Front End Developer | TCGplayer.com - Marketing, *2013 - 2018*

- Built and maintained Umbraco CMS platform powering all marketing content and campaign initiatives; collaborated with creative teams on visual design, branding, and social ad campaigns
- Crafted animations and interactive elements for marketing content, building hands-on motion and interaction design skills
- Designed and implemented email marketing templates and automated drip campaign workflows

SKILLS

Design Systems: Component architecture, design tokens, Style Dictionary, Storybook, ZeroHeight, Figma, Adobe XD, design system governance

Languages & Frameworks: TypeScript, JavaScript, React, Angular, Next.js, Web Components / StencilJS, Vue.js, HTML, CSS/SCSS, Python (Django), C# (Razor)

Tooling & Infrastructure: NPM, Grunt, Gulp, Webpack, Vite, monorepo (changesets), CI/CD pipelines, Docker, GitHub/GitLab, Git, Jira/Confluence

Content Management Systems: WordPress, Django/Wagtail, Umbraco

AI & Emerging: MCP integrations, AI Design System Assistant, Figma MCP, Claude API, design-to-code tooling

Practices: Accessibility (WCAG 2.1), QA testing, wireframing, interactive prototyping, visual design, motion & micro-interactions, Agile/Scrum

EDUCATION

Design Studies, Branding & Visual Communications | Courses audited at Syracuse University
Visual Design & Communications | A.A.S, Cazenovia College

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Smart Interface Design Patterns | Smashing Magazine, 2022
Umbraco Codegarden | Odense, Denmark, 2019
Umbraco Certified Developer | 2017
